"We are bringing the best of Photoshop to the Web, so it can be adopted by anyone to create amazing things at any time, on any device. Share for Review works as an extension of our web and mobile apps, so there's no need to switch back to the desktop. Users can work on a project from any location — desktop, laptop, or mobile — or simply start a collaborative project with a single click," said Shantanu Narayen, president and chief executive officer at Adobe. To fill the gap in the creative workflow from ideation to sharing, Adobe also outlined plans to launch a new experience for creating, editing, and sharing images across a range of platforms, such as mobile, the web, or social networks. With a host of new features, the flagship Photoshop app for desktop provides a single editing work environment for lead users to collaboratively edit, refine, and publish any version of an image — on any of the web, mobile, or social networks. To get even better, Adobe continues to enhance the performance and quality of selections made in Photoshop. The new feature called Smart Move fills in missing areas and removes noise and objects that shouldn't remain. The new Delete Content from Select tool ensures a clean selection without having to manually clear the selection. A one-click Fill tool replaces an object with a neutral background while preserving highlights and shadows. Other new features include a Lighten/Darken tool, a Healing Brush tool for removing and repairing objects, and Single Image Deblending, which removes dust and other unwanted highlights and shadows from an image.
