Kiss the old standalone programs goodbye, we're moving to a new standard in the series of applications. Elements now falls under the Creative Cloud umbrella. MovieMaker joins Elements in the cloud, too. To start, you get the EOS Utility, which is an image processor that comes standard with your camera. The integration of Photoshop with the Adobe Creative Suite is free. Elements, you will gain a number of features, including three print profiles, the ability to make print editions of your work, and the ability to video screen record live (as long as you're using a compatible video camera). Keeping that last feature, if you want to take a screen recording of your digital work, you need to invest in a USB video capture device (either the Pocket Wizard, or the XR-mini). And, to get that feature, you need to pay for the full Adobe Creative Cloud subscription. The learning curve to get there is quite steep, as you must first familiarize yourself with the Creative Cloud, learn how to track your projects and images, ultimately materialize the movie package via the Adobe Media Encoder, and then ultimately transmit it to be made accessible to others. When installed, the EOS Utility is a welcome companion for Photoshop and Elements. That said, big stumbling block is

that unlike in the standalone programs, there's no way of easily switching back and forth between the programs without having to close the one that's active. You have the ability to edit, organize, and save your work all on your home computer. You can use your phone to add things to Facebook, snap a quick photo, or even create a video demo of your work. Now imagine being able to do all this wherever you are, and all at once. It's amazing to consider how much you can accomplish when you have the tablet in hand.

By removing this content and toolkit, we're able to reduce the size and number of native packages to better fit on mobile. A simplified user experience will ensure that the user gets to where they need to go more quickly and easily. Exporting scenes to Premiere Pro or After Effects Pro is not a supported workflow. The new versions of Adobe Creative Cloud tools will only export to After Effects using the native GPU. However, Creative Cloud Subscription owners will continue to receive the Creative Cloud SDK apps for access to Creative Cloud assets, tools, and features. Additionally, we will continue to issue updates for user files when content becomes available via the personal license. Adobe provides digital creative software for print, video, mobile, the web, apps, social listening, and enterprise so that small and medium sized businesses can efficiently create, manage, and serve content across any channel. Adobe is focusing our efforts on stability and readiness for Enterprise, now, we're not able to support post-production pipeline workflows, such as the Planar workflow. However, we are making the multi-platform Planar Creative

Cloud SDK app available on its own, independent of the Adobe Photoshop desktop app. The Planar app allows users to access and organize and annotate image stacks and live camera streams in a more manageable and reliable way. Planar is ideal for workflow collaboration, publication workflow, and self-directed learning.
