Adobe loves iOS: it has the biggest, strongest audience—and iOS devices are usually its cheapest. The Photoshop editing/managing app, Adobe Photoshop, costs \$9.99 for iPhone and iPad, and requires an account with Adobe Creative Cloud. You can also buy a cheap, standalone version of Photoshop that works with any photo editing app—like iResize—if you don't want to buy a yearly subscription. Like most apps, it's still not bundled in a box with a phone, like the Pixel or iPhone itself. You'll just have to buy a new phone if you drop your phone. There isn't a Mac version of Photoshop Elements yet, but seeing as Photoshop CS has been released since the end of last year, I suspect that there will probably be no reason why it wouldn't be available on the Mac App Store when the final versions are out. We'll update this review if it happens! Forums can be a great and reliable source for finding out how users like and dislike or feel about a product, a complaint, a feature, or a bug. But the evaluation criteria for Photoshop and Lightroom may be different. One forum or reviewer is not always right. Yes, it is a disappointment that most of the new features were for Windows users, still leaving Mac users slowly catching up. In addition, the new Layers panel is incredibly poorly organized, and its search feature is slow and buggy. For more information on Photoshop Elements 3, read my Photoshop Elements 3 review. While we certainly love Photoshop, we think that the name doesn't do it enough justice. It's kind of like what you'd get if Microsoft combined an Adobe Photoshop and an Adobe Illustrator. There are many great features not just within the program itself, but it's workflow makes it a favorite editing tool if you are a professional or an amateur who enjoys retouching photos.
